

ABOUT DIVITAS

Founded in 2005, DiVitas Networks has rapidly become the leader in Enterprise Social Networking and Mobile Unified Communications (Mobile UC). DiVitas offers a next-generation platform for business communications and real-time collaboration that enables individuals to actively stay connected and engaged.

DiVitas mobilizes the existing deskphone number and its PBX features to provide Business Voice on a smartphone. DiVitas then integrates Business Voice with IM and familiar social-networking applications such as Status and Mobile Presence to provide real-time communication and collaboration. DiVitas enables individuals to proactively stay engaged within their community – and to connect efficiently with each other. Individuals within the DiVitas secure community check one another’s availability (via Mobile Presence and Status) to make more intelligent communication choices, for example, choosing to call or IM depending on a person’s stated preferred mode of contact. This proactive communication approach dramatically reduces missed calls by increasing the probability of connecting on first attempt. Making the workforce more reachable significantly increases productivity

Customers depend on DiVitas to:

- Actively engage with others by viewing Mobile Presence and Status to inform and collaborate
- Connect on first attempt using Business Voice and IM to reach and respond
- Stay connected and engaged by roaming seamlessly between WiFi and cellular networks

DiVitas offers its Mobile UC client across a broad choice of commercially available smartphone handsets – Android, BlackBerry, iPhone, Nokia and Window Mobile. The solution also works in conjunction with any TDM or IP PBX system available on the market.

DiVitas has been successfully installed at customer sites in three flexible configurations:

- Deployed and managed by the enterprise - where the customer IT department manages and maintains both the DiVitas Server and Client
- Deployed within the enterprise and managed by a Service Provider on behalf of their customer where the DiVitas server is installed on site but its management is outsourced
- Carrier hosted and managed where the customer enjoys the capability of DiVitas Mobile UC as a service
